Outstanding solutions for demanding applications

Introducing a New Paradigm in Ceramic-Embedded Cutters

NTK Achieves Industry-First Triple-Blade Configuration with Ceramic Negative Inserts for $\phi 16$ Cutters
By utilizing double-sided, high-strength negative inserts and the high efficiency of three blades, NTK contributes to cost-effective tooling, stable machining processes, and enhanced productivity.

Enhancing Machining Efficiency Further with Increased Insert Count

JRF Cutter (Negative insert)

Conventional (Positive insert)

High-Efficiency Machining with 3-insert Design
at $\phi 16$ - Supports Maximum Table Feed of 7200mm/min!

Economical with Double-Sided Usable Negative Inserts

Extended Lifespan Chipbreaker

Our Step Chipbreaker: Reduces Flaking by Lowering the Cutting Edge from the Clamping Surface of Conventional (Positive Insert) Tools.

Prevent Insert Movement During Machining with Increased Clamping Force

Insert Damage Suppression with Chipbreaker-Equipped Negative Inserts and Increased Clamping Force!

Instructions for Installing Parts on the JRF Cutter

Insert the cap screw from the front and turn it once with a hex wrench inserted from the back

Insert the wedge screw into the cap screw from step 1 and turn it by hand one full rotation.

While holding the wedge screw from step 2 by hand, insert a hex wrench from the back and continue turning it until it stops.

Insert a torque wrench from the back and clamp the insert with the recommended torque value from the table below.
